

Relational Machine Learning Group

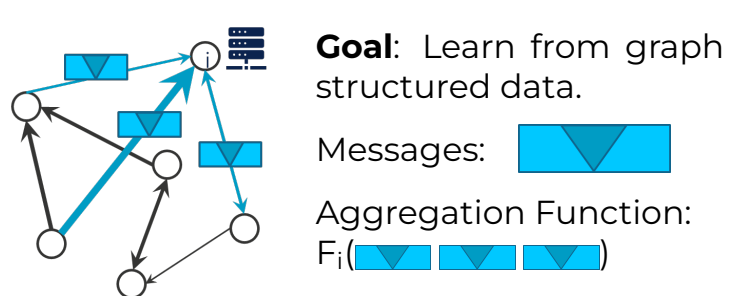

RESEARCH INTERESTS

Welcome! We are the Relational ML research group. Our research is supported by an **ERC starting grant** and **Apple Research** to improve the **efficiency of deep learning**. The aim is to design smaller-scale neural networks, which excel in noisy and potentially changing environments and require minimal sample sizes for learning. This is of particular interest in the sciences and application domains where data is scarce. Please check out our newest insights. Come and join us. Looking forward to discuss!

DEEP LEARNING EFFICIENCY

GRAPH NEURAL NETWORKS

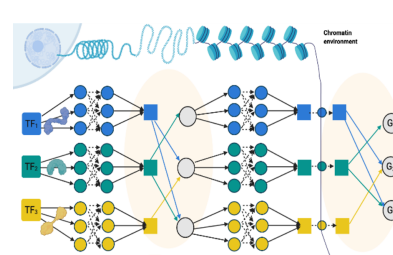

DEEP LEARNING THEORY

Goal:

- How can we train efficiently?
- What is the implicit bias of overparameterization?
- When do lottery tickets exist?
- ...

BIOMEDICAL APPLICATIONS

Goal:

Integrate domain knowledge for sample efficient, trustworthy & interpretable learning
